

# What's new?

We are happy to announce that the following changes will be available on your eLABS application from **03-12-2019**:

## Web: Operational Dashboard

For your convenience, we have added the lab number and hierarchy per sample to the Operational Dashboard. The "REVIEWED" status has also been replaced with "REGISTERED" as this is the preferred term for when a lab has received a sample.

	Facility	Lab	Sample Barcode	Batch Barcode	Lab Number	Date Recorded	Test Type	Status	Sample Type
<input type="button" value="View Facilities"/>	Demo HCF	Demo Lab	TBC021219A	00000_2DEC19_1575285042	ZML123423423	2019-12-02 13:12:54	HIVVL	REGISTERED	Whole blood

## Web: Sample Dashboard

The previous sample dashboard pulled the TAT dashboard, Operational dashboard and Temperature dashboard for a single barcode. We have realised that this is redundant as one can drill down to item level and get the same results per dashboard and this is not what the Sample dashboard was intended for. Instead we have created an item details tab, which will display all fields saved in the database for that specific sample, an item log, where every change to the sample can be viewed as well as a temperature log that will display all temperature related data recorded.
